

TESSELLATE PRESENTS

Scholastic Test of Excellence in Mathematical Sciences

## Computer Science Category B

Exam Date : 7th January 2023  
Exam Timing : 3 PM IST - 6 PM IST  
Form Link : <https://forms.gle/XXZ8Xy1Yvfys2hw89>

# Rules and Regulations

## Marking Scheme

1. Time duration for the exam is **3 hours: 3 PM - 6PM**. Submit your answers(i.e.- the Google form : <https://forms.gle/XXZ8Xy1Yvfys2hw89>) by **6:30 PM. This is a hard deadline**. No submissions past 6:30 PM will be accepted. Submissions should only be via form and any submission via mail will be ignored.
2. The marks for each question is mentioned in bold square brackets before its statement.
3. **The subjective part will be graded only if you score above a certain cut-off (to be decided later) in the objective section of the paper.**
4. **The final cut-off shall be based on your total score (Objective + Subjective).**

## Miscellaneous

1. Write your solutions neatly, and submit the scanned PDF. Solutions should be brief and should contain all the necessary details. Name your file as “**Full name Subject Name Cat B**”. Note that Category B consists of students from the first year of university to the final year. If you do not belong to this class of participants, please do NOT attempt this paper.
2. **Please note that the form DOES NOT auto-submit.** You have to press the submit button yourself.
3. Use a good application to scan handwritten text into PDF. Kindly make sure that the answers are legible and that your furniture or flooring is not a part of the submission.
4. Ambiguous or illegible answers will not gain credits. If you strike something out, strike it out properly so that it is clear to the evaluator what you want to read. Please avoid overwriting your answers.
5. Answers should be your own and should reflect your independent thinking process.
6. Do **NOT** post the questions on any forums or discussion groups. It will result in immediate disqualification of involved candidates when caught.
7. Sharing/discussion aimed towards solving or distribution of problems appearing in the *contest while the contest is live in any kind of online platform/forum shall be considered as a failure in complying with the regulations.*
8. Any form of plagiarism or failure to comply with aforementioned regulations may lead to disqualification.

## Contact details

- For subject related queries, clearly mention your **category (B)** in the mail.
- For **subject related** queries, contact:
  - Official email ID: **stemscsenquiry@gmail.com**(This email will be actively checked during the exam. It is advisable to send queries to this email address.)
  - Rajdeep Ghosh: rajdeep@cmi.ac.in
  - Rohan Goyal: rohang@cmi.ac.in
- For **technical** queries, contact:
  - Siddhant Shah : siddhants@cmi.ac.in
  - Rohan Goyal : rohang@cmi.ac.in

# Questions

## Objective

1. [2 marks] Let  $M$  the number of subsets of  $[12,000] = \{1, 2, \dots, 12,000\}$  such that for any two elements of the subset, the absolute value of the difference between them is a multiple of 3 or 4. Find  $M \pmod{1000}$
2. [2 marks] Let  $a_n$  denote the number of ways to tile a  $1 \times n$  grid with  $1 \times 1$  and  $1 \times 2$  tiles. If the recursion for  $a_n$  has the form

$$a_n = c_1 a_{n-1} + c_2 a_{n-2} + \dots + c_6 a_{n-6}$$

Calculate  $c_6 10^6 + c_5 10^5 + \dots + c_1 10$

3. [2 marks] Consider the following three functions:

$$f_1(n) = n^{n^n}$$

$$f_2(n) = (100n!)^{n!}$$

$$f_3(n) = F_n^{F_n}$$

where  $F_n$  is the  $n^{\text{th}}$  Fibonacci number. Given functions  $f$  and  $g$ , we'll write " $f < g$ " if  $f(n) = o(g(n))$ . If you're not aware of the meaning of  $o(g(n))$ , jump to "Little-o notation" at [Big O Notation](#). Then choose the correct alternative out of the following:

- (a)  $f_1 < f_2 < f_3$
  - (b)  $f_2 < f_1 < f_3$
  - (c)  $f_3 < f_1 < f_2$
  - (d)  $f_1 < f_3 < f_2$
  - (e)  $f_3 < f_2 < f_1$
  - (f)  $f_2 < f_3 < f_1$
4. [3 marks] Consider the integer lattice of points  $\{(x, y) | x, y \in \mathbb{Z}\}$ . We start with three points marked on this lattice at  $(0, 0)$ ,  $(1, 0)$ ,  $(0, 1)$ . Now, in every move, you can pick a point currently marked on the lattice say  $A$ . Let the other two points be  $B$  and  $C$ . Then you can mark any other point  $D$  on the lattice as long as  $AD \parallel BC$  and you have to unmark  $A$ . Assume that after some moves, two of the points are at  $(0, 0)$  and  $(2023, 1)$ . How many possibilities are there for the third point if it's coordinate is  $(x, y)$  such that  $|x|, |y| \leq 2023$ ?
  5. [3 marks] For any function  $f : [5] \mapsto [5]$ , we say the function is 2-colourable, if  $\forall i, j \in [5], \exists k, l > 0$  such that  $f^k(i) = f^l(j)$  and  $\exists g$  function from  $[5] \mapsto [2]$  such that  $\forall i, g(i) \neq g(f(i))$ . Find the number of 2-colourable functions from  $[5]$  to  $[5]$ .<sup>1</sup>

---

<sup>1</sup> $[5] = \{1, 2, 3, 4, 5\}$

6. [3 marks] Consider the following network:

The vertices are numbered as follows: The vertex at the center is numbered 0. The vertices in upper vertical line are numbered 1, 5, 9, ..., those in the right horizontal line are numbered 2, 6, 8, ..., those in the vertical line are numbered 3, 7, 11, ... and those in the right horizontal line are numbered 4, 8, 12, ...

You can only travel along the indicated lines from a lower number to a higher number. Find the number of paths from 0 to 21.

## Subjective

1. [7 marks] We define sequences  $a, b, c$  as follows:

- $a_1 = b_1 = 1, c_1 = 0$
- $a_{i+1} = a_i + b_i + c_i$
- $b_{i+1} = a_i + b_i$
- $c_{i+1} = a_i + c_i$

Prove that  $\forall m, n \in \mathbb{N}$ :

- $a_m a_n + b_m b_n + c_m c_n = b_{m+n}$
- $a_m a_n + b_m c_n + c_m b_n = c_{m+n}$

2. [7 marks] You have an array (which you know)  $a_1, \dots, a_n$ . In each move, you can partition it into contiguous subsets and reverse each contiguous subset.

- [4 marks] Show that the array can be sorted in  $O(\log^2 n)$  moves.
- [3 marks] Show that there is no deterministic algorithm that sorts each array in  $o(\log n)$  time.

3. [7 marks] A *switch automaton* is defined to be a 7-tuple  $(Q, \Sigma, \Gamma, \delta, s, \perp, \{F_1, F_2, \dots, F_n\})$ . All of the first six elements are defined as they usually are for nondeterministic pushdown automata. The last element is a set whose elements are subsets of  $Q$ , and we call each of its elements a class of final states.

Runs in a switch automaton work exactly as they do in a pushdown automaton. However, a switch automaton  $M$  accepts an input  $w$  iff for each class of final states  $F_i$ , there exists a run of  $w$  on  $M$  such that the entire input  $w$  has been read, and the state that the machine is on at the end of the run is in  $F_i$ .

Let a language that is accepted by a switch automaton be called a *switch language*, and let the class of such languages be SL. Let the class of context free languages be CFL, and the class of recursive languages be R. Show that  $\text{CFL} \not\subseteq \text{SL} \not\subseteq \text{R}$ .

4. [7 marks] We consider the following variation on the classical 20 questions game: Two players Alice and Bob play a game where Alice has a set  $S \subset \{0, 1\}^n$  such that  $0 < |S| = k < 2^{n-1}$ . Now, Bob can ask Alice *questions* which are any functions  $q : \{0, 1\}^n \mapsto \{0, 1\}$ . Now, Alice can choose any  $s \in S$  in response to a question and respond with  $q(s)$ .

- [3 marks] Find the smallest  $l$  in terms of  $n$  and  $k$  such that Bob can always ask some questions and find a list  $L$  of size at most  $l$  such that  $L \cap S \neq \emptyset$
- [4 marks] Show that Bob can find such a list with at most  $n^{2k}$  questions.

5. [7 marks] Let  $G = K_{2n}$  be the complete graph on  $2n$  vertices for some  $n \in \mathbb{N}$ . Now consider colourings  $\chi$  on  $G$  with two colours. Find the length of the longest walk<sup>2</sup> such that the endpoints of every edge in the walk have different colours.

**All the Best!!**

---

<sup>2</sup>A walk can have repeat vertices but not edges
